

Little Judique Harbour

CHS Chart No: 4462 – St Georges Bay
4448 – Port Hood and Mabou Harbour

Amenities: water?, power?

Harbour Authority: DFO does not list this harbour. The harbour authority is not known

Description:

We have very little information on this harbour.

The approach is very shallow: available bathymetric data indicates less than 2 feet. Breaking seas may be encountered on the approach even in moderate conditions. Depths of up to 6 feet are reported alongside the wharves.

Since it is less than 2 nm from Little Judique Ponds (Maryville) Harbour, and not far from Port Hood Harbour (Murphy Pond) it is probably best to avoid this harbour until better information becomes available.

Navigation:

The harbour entrance is located at **N45°57.52'/W61°31.73'**. A sector light is shown from a R&W daymark at the inner end of the south breakwater. The white sector (122T) indicates the preferred approach. A light (Fl G, 4s, 2nm) is shown from the north breakwater.
